

saigon golf and country club, vietnam

Client

Norfolk Group

Project team

Hansen Partnership
National Institute of Urban & Regional Planning
Independent Golf Course Services

Project description

Hansen Partnership in collaboration with Vietnam's National Institute of Urban & Regional Planning were invited to undertake the masterplanning of a world class golf resort on a 120 hectare site in Saigon (Ho Chi Minh City), Vietnam.

The proposed development incorporates a world class 27 hole championship golf course, country club, a five star resort hotel, 200 residential lots, apartments, sports facilities and a health spa.

Members of the Hansen team travelled to Vietnam to work collaboratively with local professionals to develop a design that incorporated the specific requirements of local government as well as injecting a distinctly international feeling to the project.

A key element of the design was the use of a 'closed' water treatment system which circulates and treats all the water on site making this golf course a truly unique and significant environmental project in Vietnam. Other key elements of the design include generous sized allotments with low site coverage presenting the residential areas as a truly integrated part of the golf course.

Hansen's design team also developed a 3D virtual model which allowed the client to see the site from a series of critical views as well as develop a fly-through animation to be used in presentations and marketing.

Hansen's urban planning team worked with local government experts and members of the National Institute to coordinate the planning submission and presentation to the Department of Architecture.
